	Document No: <u>DOTr-HRDD-Forms-004</u> Rev. No.: <u>001</u> Effective Date: <u>03 August 2022</u>
	RE-ENTRY ACTION PLAN (REAP) FORM

INSTRUCTIONS: This form is used in preparing a proposed Re-entry Action Plan in applying to a Scholarship Program. Duly accomplished and signed forms will be submitted to the HRD Division along with the other documentary requirements.

Title of Scholarship Program:	JDS 23rd Batch Scholarship Program
Name of the Development Partner	Japan International Cooperation Center through the National Economic Development Authority (NEDA)

I. REAP BACKGROUND AND INFORMATION	
a. REAP Title	Standards for Railway Track Defect Identification and Corrective Maintenance Procedure
b. REAP Objective	The objectives of the REAP can be divided into four sections. 1. Develop a Track Defect Identification System by gathering and analyzing data on railway defects from Philippine railway operators, cross-referenced and validated with international standards, to be completed within 6 months, upon return to work in PRI. 2. Formulate a Standard Procedure for Corrective Maintenance based on the identified track defects, incorporating best practices from Philippine railway operators and internationally approved maintenance procedures, to be finalized within 6 months, upon return to work in PRI. 3. Design capacity development training materials for the finalized track defect identification system and corrective maintenance procedure, ensuring that the materials are aligned with finalized standard and implementation, within 3 months, upon return to work in PRI. 4. Conduct Capacity Development Training Course that is based on the developed standards, using the designed and prepared training materials to all railway personnel involved in railway tracks and guideways maintenance personnel, after approval of the training materials from the PRI's Executive Director.
c. Problem/Opportunity	One of the significant issues in the Philippine railway system today is the lack of a unified set of railway operational and maintenance standards. While each railway operator has their own internal procedure and guidelines, there is no unified framework that guides the entire sector in terms of best practices, safety protocols, and operational efficiency. This absence of standardized processes results in a variety of approaches to railway operations and maintenance can create inefficiencies, inconsistencies, and even safety risk. The absence of unified guidelines has resulted in varying maintenance procedure and missed opportunities for timely repairs. This has then led to delays, operational inefficiency, and even safety risks. For example, incidents related to track defects such as track structure issues and track

	alignment issues have been observed, leading to operational disruption and even rolling stock derailments. This scenario demonstrates the lack of standardized procedures can have a direct impact on the day to day operations of railway systems. This issue clearly presents an opportunity for improvement, establishment of standardized procedure for identifying track defects and conducting corrective maintenance. By developing a comprehensive guideline for railway track inspection and repair, railway operators can ensure that defects are identified properly and repaired according to effective procedures, regardless of railway operator. The lack of such standards hinders the potential for improving the overall safety and efficiency of railway operations in the Philippines. However, the development of these standards is only part of the solution. While a set of standardized procedures will lay the groundwork for consistency, it is also important that railway personnel are competently trained to understand and apply these standards effectively. This is where the importance of training comes into play. Even the most developed standards will not achieve their intended impact if the personnel who are responsible for implementing them do not understand the standards they should follow. Training serves as an effective medium for communicating the new standards to all relevant railway personnel, from track maintenance crews to track engineers. By providing a targeted, capacity development training, these personnel will not only become familiar with the guidelines but also learn how to implement them in their daily maintenance activities. This will ensure that the standards are not theoretical and left written but are also actively applied.
d. Description in relation to the Department i. Organizational Outcome	1. Policy Evaluation and Formulation The development of a standardized system for identifying railway track defects and implementing corrective maintenance procedures directly addresses the lack of formalized standards in the Philippine railway sector. By creating clear, uniform standards for maintenance practices, the REAP will contribute to policy formulation to the Department of Transportation. This will help streamline maintenance practices across various railway operators in the Philippines, ensuring that procedures for identifying and repairing track defects are consistent, efficient, and based on local and international best practices. Formalizing these standards will also support the alignment of railway operations with safety and quality standards, which are essential for improving overall service reliability and minimizing operational risks. 2. Building Competencies In addition to the policy formulation aspect, this REAP will enhance the competencies of railway personnel, particularly in the areas of track defect identification and corrective maintenance. With the development of targeted training materials and programs, through the Philippine Railways Institute (PRI), railway personnel will be trained to understand and apply the newly formulated standards effectively. By ensuring that the workforce is equipped with the necessary skills to execute these procedures, the REAP will contribute to building a more competent, confident, and professional workforce.

 	Republic of the Philippines Department of Transportation
	Document No: <u>DOTr-HRDD-Forms-004</u> Rev. No.: <u>001</u> Effective Date: <u>03 August 2022</u>
	RE-ENTRY ACTION PLAN (REAP) FORM

	This will lead to improved maintenance practices, which are essential for reducing risks, minimizing downtime, and improving the safety and efficiency of the rail network.
ii. Target Competency Improvement	The main objective of the JDS program is to strengthen the government's administrative capacities through provision of post graduate studies which shall enable applicants to enhance their skills in formulating and implementing social and economic development plans. With these, it perfectly aligns with both REAP outcome. Through the program's focus on policy analysis and development, I am expected to learn how evaluate existing maintenance frameworks and establish data-driven, standardized policies for track defect identification and corrective maintenance procedures. These competencies will enable me to create applicable and consistent policies that meet both local needs and international standards. The program will also provide practical skills in training and workforce development, which are important to building competencies of railway personnel. By developing targeted trainings module based on the new standards, it will enable railway personnel to accurately apply these practices.
e. Relation to the Government's Development Plan	This REAP aligns with the PDP 2023-2028, specifically in Chapters 8, 12, and 2. First, in Chapter 8: Advance Research & Development, Technology, and Innovation, the REAP's methodology of research-based standard development supports both Outcome 1: Basic R&D and knowledge creation strengthened, and Outcome 2: Market-driven and customer-centered research and development advanced. Collecting localized data from railways directly contributes to evidence-based standards tailored to the Philippine context. In Chapter 12: Expand and Upgrade Infrastructure, the REAP's focus on developing maintenance standards asserts Outcome 2: Seamless and inclusive connectivity via local and international linkages achieved, specifically railway transportation. Standardized procedures support consistent safety and reliability, enhancing infrastructure in line with nation goals. Finally, Chapter 2: Promote Human and Social Development, specifically Subchapter 2.2 Improve Education and Lifelong Learning, is progressed through the REAP's training component. By equipping railway personnel to implement developed standards through capacity development trainings, the REAP supports Outcome 3: Governance for human capital development improved.

	Apart from the PDP 2023-2028, the REAP's objectives also aligns with the provision of Sustainable Development Goals (SDG) 9, 11, and 8. SDG 9: Industry, Innovation, and Infrastructure – <i>Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation.</i> Developing a standardized track defect identification system and corrective maintenance procedures enhances infrastructure resilience and sustainability in the railway sector. SDG 11: Sustainable Cities and Communities – <i>Make cities and human settlements inclusive, safe, resilient, and sustainable.</i> By improving railway maintenance standards, the REAP enhances the safety, reliability, and efficiency of rail transport systems, contributing to a safer, more sustainable urban transport options. SDG 8: Decent Work and Economic Growth – <i>Promote sustained, inclusive, and sustainable economic growth, full and productive employment, and decent work for all.</i> The creation of training materials and delivery of training courses empower railway personnel by providing them with updated skills and knowledge for safe and efficient maintenance practices, supporting decent work and economic stability.
f. Direct Beneficiary	The immediate beneficiaries of this REAP will be railway personnel, specifically those involved in train operations and railway maintenance. This includes engineers, technicians, workers, train operators, and other staff working on tracks at Philippine National Railways (PNR), Light Rail Transit Authority (LRTA), Light Rail Manila Corporation (LRMC), MRT3, as well as upcoming railway lines. Additionally, employees from private contractors who provide external services related to track repairs for railway operators will also benefit. According to PRI's records, a total of 1,623 personnel has completed the PRI's Refresher Training Courses in Commercial Train Driving and Railway Maintenance (as of this writing). These individuals are expected to directly benefit from the REAP. Apart from the current railway pool of railway personnel, personnel who intends to join the railway work will also benefit from the REAP. The REAP will benefit these personnel by providing them with updated and standardized knowledge on track defect identification and corrective maintenance procedures. This will enhance the efficiency, safety, and reliability of the railway system, ultimately improving service delivery and operational standards across the country. By equipping railway workers with the necessary skills, this initiative will foster a more skilled workforce and contribute to a safer, more dependable railway network.
g. Gender Equality, Disability, and Social Inclusion (GEDSI)	According to the Philippine Statistics Authority's Public Transport Accessibility and Safety Report, railway transport is the mode of public transport chosen by the marginalized sector of passenger. These passengers include persons with disabilities (PWD), senior citizen, pregnant women, and other priority passenger. True enough, rail transport offers better accessibility and safety to these passengers. In recognition of their needs, railway operators prioritized their and safety and comfort. The first car in the train is dedicated to them, with the first two doors specifically designated for PWDs, senior citizens, and pregnant

	RE-ENTRY ACTION PLAN (REAP) FORM

	women. The remaining doors of the first car are assigned to women passengers. However, the safety of these passengers is at risk if there are track defects due to poor maintenance, which could lead to railway accidents. By ensuring a standardized track defect inspection and corrective maintenance procedure, this REAP indirectly contributes to safeguarding the passenger in the first car. The implementation of these procedures can prevent accidents and ensure continued safety and reliability of the railway system, benefiting the marginalized groups of passengers and promoting an inclusive transport system.
h. Output	There will be 2 major outputs for this REAP. 1. Standards in Railway Track Defect Identification and Corrective Maintenance Procedure – This output will directly contribute to the DOTr’s mission to provide efficient, effective, and secure transportation systems that are globally competitive and compliant with international standards. By establishing a unified and internationally aligned standards for railway track defect identification and repair, it will ensure that the Philippine railway sector operate safely, efficiently, and in compliance with best practices. 2. Capacity Development Training Course on the Developed Standard – The second output aligns with the PRI’s mission to provide quality training and promote human resource development within the railway sector. The developed training course will provide railway personnel with a standardized knowledge to implement the newly established standards effectively.

II. REAP TIMELINE AND IMPLEMENTATION

a. Measurability	To monitor the success of the REAP, the implementation will be measured according to its two major outputs mentioned above. For Output 1, Standards in Railway Track Defect Identification and Corrective Maintenance Procedure, the milestones are. Completion of data gathering and analysis phase with Philippine railway operators and alignment with international standards within 6 months. From this, a drafted standard will be submitted for review by stakeholders within 6 months. After the final revision, it shall be then approved and adopted by the DOTr. To monitor the success of the approved standard, there will be audits and compliance checks within railway operators. Successful implementation will be indicated by uniform adoption across railway operators. For Output 2, Capacity Development Training Course on the Developed
------------------	---

	Standard, there shall be two milestones. Completion of training based on the finalized standards within three months after the approval. Then, the rollout of the capacity development training course to all relevant railway personnel within one month after the training materials have been approved. To monitor the success of this output, it shall follow the prescribed training program of PRI's Capacity Development Training (CDT) Course. After the completion of every CDT batch, each participant shall submit a re-entry action plan based on their learnings, detailing how will they apply the training within their railway organizations. Then the PRI's Research and Development Division (RDD) will conduct assessment and audits within railway operators to verify if the participants re-entry action plan are being met and implemented as planned.		
b. Sustainability	The Standards for Railway Track Defect Identification and Corrective Maintenance Procedure will be published as an official policy. As a published policy, it will be embedded into the regulatory framework of the Department of Transportation (DOTr) and railway operators, ensuring long-term implementation across the sector. For the Capacity Development Training (CDT) Program, the developed course will be integrated into PRI's pool of regular CDT offerings. By doing so, it will remain a key part of the continuous professional development of railway personnel. This ensures that the knowledge and skills acquired through the REAP will be maintained within the railway workforce. To maintain relevance, both the published standard and the training program will be regularly reviewed. Whenever necessary, revisions to the standard will be incorporated into the CDT, ensuring that the workforce is always updated with the latest practices and procedures. These continuous updates will ensure the sustainability and continuous improvement of the REAP's impact.		
c. Predictive Action Steps with Identified Success Indicators			
i. Phase/Stage	ii. Expected Output	iii. Timeline	
• Data Gathering and Analysis	• Collated data of track defects and maintenance procedures	• 6 months	
• Standard Drafting and Development and Stakeholders Review	• Drafted, reviewed, and revised standards	• Within 6 months after data gathering	
• Final Revision and Adoption	• Final and signed Standards	• Within 1 month after Final Revision	
• Training Material Design	• Training Curriculum and Training Materials	• Within 3 months after final approval of standards	
• Training Delivery	• Trained Railway Personnel	• Within 1 month after approved training curriculum and materials	
• Monitoring and Evaluation	• Audit reports	• 6 months after rollout of initial training

	RE-ENTRY ACTION PLAN (REAP) FORM

d. Target Date to Start	After JDS Program (Estimate November 2027)
e. Target Date to End	December 2029

III. RESOURCES

1. Data Gathering and Analysis

Data collection and Consultation Meetings with Railway Operators

- Cost: Php 20,000
 - Meals and Refreshments: Php 15,000
 - Logistics and Materials: Php 3,000
 - Transportation Cost: Php 2,000
- Funding Source: Internal Fund to be allocated to from PRI's budget on Research and Development and Policy Formulation

2. Standard Drafting and Development

Drafting and Meetings (Draft Review Sessions with TWG/Railway Operators/Stakeholders)

- Cost: Php 20,000
 - Meals and Refreshments: Php 15,000
 - Logistics and Materials: Php 3,000
 - Transportation Cost: Php 2,000
- Funding Source: Internal Fund to be allocated from PRI's budget on Research and Development and Policy Formulation

3. Training Material Development

Development of Training Curriculum and Training Materials (Powerpoint Presentations)

- Cost: No Cost (Overhead Cost as this is part of my function as a Training Specialist III)
- Funding Source: N/A

4. Printing of Training Materials (Handouts of 200 copies)

- Cost: Php 50,000
 - Handout Materials (Papers, Ring Binds, Vellum Boards): Php 15,000
 - Printing Cost: Php 20,000
 - Ring Binding Cost: Php 10,000
- Funding Source: Internal Fund to be allocated from PRI's budget on Training Planning and Design

5. Final Revision and Adoption

Printing, Signing, and Publication of the approved final revision of the standard

- Cost: No Cost (Overhead cost)
- Funding Source: N/A

6. Training Delivery

Conduct of the Capacity Development Training (CDT) Course (includes food and refreshment for the participants)

- Cost: Php 151,000

- Food and Refreshments: Php 30,000 x 4 Batches = Php 120,000
- Training Kit: Php 26,000
 - Pen: Php 10 x 200 participants = Php 2000
 - Stationeries: Php 15 x 200 participants = Php 3000
 - Name Plates: Php 30 x 200 participants = Php 6000
 - Trainee ID: Php 50 x 200 participants = Php 10,000
 - Envelopes: Php 25 x 200 participants = Php 5000
- Examination Materials: Php 5000
- Funding Source: Internal Fund to be allocated from PRI's budget on Training Delivery

7. Monitoring and Evaluation

Conduct of Audits and Assessment on the implementation of CDT Course trainee's re-entry action plans.

- Cost: No Cost (Overhead cost as part of the function of RDD personnel)
- Funding Source: N/A

IV. COMMENT(S) AND RECOMMENDATION(S)

a. Immediate Superior (Mentor)	
b. Head of the Office/Division/Service	
c. Human Resource Development Division
