

Republic of the Philippines
Department of Transportation

Document No: DOTr-HRDD-Forms-004 Rev. No.: 001 Effective Date: 03 August 2022

RE-ENTRY ACTION PLAN (REAP) FORM

INSTRUCTIONS: This form is used in preparing a proposed Re-entry Action Plan in applying to a Scholarship Program. Duly accomplished and signed forms will be submitted to the HRD Division along with the other documentary requirements.

Title of Scholarship Program:	Young Southeast Asian Leaders Initiative Professional Fellows Program (YSEALI PFP) Sustainable Development and Environment Theme Cycle 1 (April-May 2024)
Name of the Development Partner	U.S. Department of State's Bureau of Educational and Cultural Affairs, through the American Councils for International Education

I. REAP BACKGROUND AND INFORMATION	
a. REAP Title	Information and Communications Campaign for the Adoption of Electric Vehicles as a Sustainable Transportation Alternative
b. REAP Objective	To ensure the success of the Re-Entry Action Plan on the information and communications campaign for electric vehicles, the SMART objective is as follows: Specific: Launch a comprehensive communications campaign aimed at increasing public awareness and interest in EVs by the general public particularly on the consumer side. Measurable: Generate a minimum of 500 social media engagements (likes, shares, comments) related to the campaign within three (3) months of launch. Achievable: Utilize the skills and knowledge acquired from the Exchange Program to create compelling content and leverage existing social media platforms and networks. Relevant: Align the campaign with organization's commitment to promoting sustainable transportation options and reducing carbon emissions. Time-bound: Complete the campaign within three (3) months, from July to September 2024, with periodic evaluations at one-month intervals to assess progress and adjust strategies as necessary.
c. Problem/Opportunity	Promoting electric vehicles (EVs) is not just a matter of advancing technology or pushing for greener consumer choices; it's a comprehensive societal shift that requires a well-informed public to succeed. In the Philippines, despite the government's efforts to promote cleaner modes of transportation, the uptake of EVs remains low. Despite the clear environmental benefits and advancements in EV technology, widespread adoption faces significant challenges. An information and communication campaign is therefore essential to overcome misconceptions, range anxiety, concerns about cost, and infrastructure readiness. These challenges call for a targeted campaign to educate the public and promote the advantages of EVs.

	To support the view that the problem and the opportunity exists in the Philippines, we can look at various reports and examples, while learning from the American experience to guide the campaign. The Philippines faces unique challenges in EV promotion, such as lack of infrastructure, consumer awareness, and incentives. Based on the data as of October 2022 from the Electric Vehicle Association of the Philippines, about 15,300 EV units are being used in the country-354 are electric motorcycles, and 88 are electric buses. As of November 2022, there are 900 EV charging units that are in various stations nationwide. The adoption rate is still relatively low, with only a few thousand units on the roads compared to millions of traditional internal combustion engine vehicles. This is partly due to the limited availability of charging stations and the higher upfront costs of EVs, which dissuades consumers from making the switch. Drawing from the experiences and learnings gained from the American fellowship and exchange program, a successful campaign must be multifaceted. The United States has made significant strides in promoting EVs, which can be attributed to a comprehensive approach that includes policy support, incentives, and a robust information campaign. Federal and state incentives such as tax credits, rebates, and grants, together with educational initiatives, such as the U.S. Department of Energy's 'EV Everywhere' campaign, have also played a crucial role in raising awareness and dispelling myths about EVs. The Philippines could adapt these strategies, tailoring them to the local content and leveraging partnerships between the government, private sector, and civil society. To replicate the success in the Philippines, an information and communications campaign must include clear messaging about the environmental and economic benefits of EVs. The campaign should also inform the public about the government's plans to increase the number of charging stations to address infrastructure concerns. The campaign should also highlight relatable figures and success stories to champion the cause. The campaign could also provide practical information, such as guides on purchasing EVs, maps of charging stations, and comparisons of long-term costs versus traditional vehicles. The Philippines stands at a critical juncture in its journey towards sustainable transportation. By drawing from the American experience and best practices, and launching a strategic information and communications campaign, the country can overcome the barriers to EV adoption. Such a campaign is not only essential for raising awareness but also for fostering an environment where electric vehicles can thrive, ultimately contributing to cleaner air, better public health, and a more sustainable future for the Philippines.
d. Description in relation to the Department i. Organizational Outcome	The Department has a critical role in promoting sustainable transportation and improving service delivery to the public. An information and education campaign on EVs can significantly enhance service delivery by promoting sustainable transportation, creating public awareness, and fostering a supportive ecosystem for EV adoption. The promotion of the shift towards electric mobility offers a pathway to a cleaner, more efficient, and modern transportation network.

	Firstly, such a campaign would educate the public on the environmental and economic benefits of EVs. By reducing reliance on fossil fuels, EVs offer a cleaner alternative that can help mitigate the impact of transportation on air quality and greenhouse gas emissions. Highlighting the economic and environmental advantages of EVs could incentivize consumers to make the switch, thereby aligning public interests with the Department's goals of reducing carbon emission and improving urban air quality. Secondly, the campaign could address range anxiety and misconceptions about EVs by highlighting advancements in EV technology, such as improved battery life and the expanding network of charging stations. By fostering confidence in the technology, the Department can encourage wider adoption, which in turn would justify and accelerate the infrastructure investments needed to support an EV-friendly environment. This would lead to a virtuous cycle of adoption and infrastructure development, improving service delivery by ensuring that EV users have access to necessary support facilities. Thirdly, education on the environmental advantages of EVs can lead to increased public acceptance and demand, which in turn can encourage more investments in EV infrastructure such as charging stations. This creates a positive feedback loop where improved infrastructure further boosts EV adoption. The campaign can also serve as a platform to inform stakeholders about the incentives and policies designed to promote EVs. This includes tax exemptions, exemption to traffic coding schemes, lower registration fees, and priority in registration for EVs. Such information can persuade both consumers and manufacturers to invest in electric mobility, leading to a more efficient and modern transport sector. Lastly, by advocating for EVs, the DOTr can position the Philippines as a leader in the adoption of green technologies in Southeast Asia. This can attract foreign investment and partnerships, leading to improved transportation services and infrastructure. Through this information and communication campaign targeted to addressing misconceptions, and ensuring infrastructure readiness, the Department can enhance its service delivery, leading to more comfortable, accessible, safe, sustainable, and affordable transportation system that benefits the Filipino people and the environment.
ii. Target Competency Improvement	As the Chief of the Department's Communications Office, the selected fellow will benefit from gaining valuable insights, knowledge, network and skills in competency areas such as leadership development, strategic communication, and cross-cultural collaboration. This experience will not only enhance her professional growth but also enable her to bring fresh perspectives and innovative ideas back to her role. In line with the Sustainable Development and Environment theme, the program can also empower the Chief of Communications to drive positive

	change and make meaningful contributions to the Department's efforts in promoting sustainable transportation practices, particularly in the realm of electric vehicles. As the Communications Chief, the selected fellow plays a crucial role in shaping the narrative and public perception of the Department's initiatives, including the exploration of strategies for implementing electric vehicles in the country. By leveraging the knowledge and expertise gained from the program, the fellow can develop effective communication strategies, engage stakeholders, and raise awareness about the benefits of electric vehicles and sustainable transportation services to advance the Department's mandate. Additionally, the fellow's participation in the program will contribute to fulfilling the office and division's mandate by fostering international partnerships, engaging with diverse audience, and expanding the Department's global reach.
e. Relation to the Government's Development Plan	The Philippine Development Plan (PDP) 2023-2028 and <i>Ambisyon Natin 2040</i> provide a strategic framework for the country's development, emphasizing inclusive growth, a high-trust society, and a globally competitive knowledge economy. An information and communication campaign on electric vehicles aligns seamlessly with these objectives by promoting sustainable and environmentally friendly transportation, which is crucial for the Philippines' development trajectory. Incorporating EVs addresses the PDP's call for a clean and efficient transport system, reducing the country's reliance on fossil fuels, and mitigating the environmental impact of its growing transport sector. This is in harmony with <i>Ambisyon Natin 2040's</i> vision for a "<i>matatag, maginhawa, at panatag na buhay</i>" (stable, comfortable, and secure life) for Filipinos, as cleaner air and less pollution contribute to public health and well-being. Moreover, the campaign educates the populace about the economic benefits of EVs, such as lower maintenance and operational costs, aligning with the PDP's goal of increasing the people's purchasing power. By fostering a knowledgeable society on EV technology, the Philippines propels itself towards <i>Ambisyon Natin 2040's</i> aim of fostering a knowledgeable and innovative society ready to participate in and benefit from the global digital economy. Thus, the campaign serves as a catalyst for achieving the nation's long-term aspirations while addressing immediate environmental and economic concerns.
f. Direct Beneficiary	The direct beneficiaries of the information and communication campaign on electric vehicles are prospective consumers and current vehicle owners considering a transition to cleaner transportation. These individuals stand to gain a comprehensive understanding of the benefits and practicalities of EV ownership. Prospective consumers, when armed with knowledge about the benefits and operation of EVs, can make informed purchasing decisions that align with their values and needs. They benefit from understanding the long-term cost savings associated with reduced fuel consumption and lower maintenance requirements. As they transition to electric vehicles, they contribute to reducing greenhouse gas emissions, thereby playing a part in mitigating climate change and improving air quality. This, in turn,

	benefits public health and the environment, creating a ripple effect that extends the advantages of their choice far beyond their immediate sphere. Furthermore, the increased consumer demand for EVs can accelerate advancements in technology and infrastructure, leading to a more robust EV market, which can potentially lower vehicle costs and expand options for future buyers. Finally, the communication campaign serves to empower consumers with the confidence to embrace electric vehicles, ensuring that they are the primary beneficiaries of this transition towards a sustainable and economically favorable mode of transportation.
g. Gender Equality, Disability, and Social Inclusion (GEDSI)	Electric vehicles represent a burgeoning opportunity to empower women and marginalized groups through focused information and communication campaigns. These campaigns can address existing barriers such as lack of awareness, accessibility, and affordability that disproportionately affect these communities. By tailoring strategies to meet their specific needs, such as providing information in multiple languages and formats, and ensuring representation in promotional materials, the campaign can foster inclusivity. The campaign can address the specific concerns of these groups by ensuring that the messaging is inclusive and relevant to their experiences. For instance, the campaign can highlight the cost savings of EVs, which is particularly pertinent for low-income individuals who often spend a disproportionate amount of their income on transportation. Furthermore, information initiatives highlight the economic benefits of EVs, such as lower fuel and maintenance costs, which can be particularly advantageous for marginalized groups often facing financial constraints. The campaign could also highlight female role models and representatives of marginalized groups in the EV industry, thereby challenging gender stereotypes and encouraging more diverse and inclusive approach to engage in this emerging industry. By actively including women and marginalized groups in the conversation about electric mobility, the information campaign can play a pivotal role in not only promoting environmental sustainability but also in driving social equity and inclusion.
h. Output	The proposed outputs of the information and communication campaign on electric vehicles are multifaceted, aiming to educate, engage, and inspire action within the target audience. Central to these outputs is the development of comprehensive information and communication materials, including digital media such as video explainers, infographics, testimonials and web content, that elucidate the benefits and workings of electric vehicles. These resources will demystify the technology for the consumers, highlighting the environmental advantages, cost savings, and

	performance features. Additionally, the campaign will leverage the Department's social media platform for broader outreach, employing a mix of engaging posts, live question and answer sessions, and partnerships to foster community and stimulate discourse around electric vehicle adoption. The campaign will also feature testimonials from current electric vehicle users, showcasing real-life examples of the transition to electric mobility. These narratives will serve to personalize the electric vehicle experience, countering skepticism with relatable success stories. Collectively, these outputs will be designed to increase awareness, build consumer confidence, and create a favorable perception of EVs. By addressing informational gaps and motivating behavior change, the campaign aims to accelerate the adoption of electric vehicles, aligning with the organization's outcome of reducing carbon emissions and fostering sustainable transportation solutions.
II. REAP TIMELINE AND IMPLEMENTATION	
a. Measurability	To measure the success of the information and communication campaign, a monitoring strategy will be devised, incorporating both qualitative and quantitative metrics. Quantitative data, such as social media engagement rates in the form of likes, comments, and shares will be analyzed, to provide tangible evidence of reach and audience interaction. These metrics can be tracked through analytics tools that monitor user behavior and engagement levels in real-time, enabling the campaign manager to adjust strategies promptly for maximum impact. Qualitative analysis, on the other hand, assesses the sentiment and reception of the campaign messages through surveys, focus groups, and feedback forms. This helps in understanding the audience's perception, whether the messaging resonates with them, and if it effectively influences attitudes, perceptions, or behaviors as intended. Regular monitoring to review these metrics against set benchmarks and goals will ensure that the campaign remains on track and any necessary adjustments can be made swiftly to optimize the outcomes.
b. Sustainability	To institutionalize and sustain the information and communication campaign on electric vehicles beyond the program's completion, a strategic approach is necessary. Collaboration with industry stakeholders, including other government agencies and private stakeholders, can create ongoing public engagement initiatives. Such partnerships could facilitate events, workshops, and public discussions where the public can interact with EVs, keeping the conversation active. Leveraging digital platforms ensures a broad and enduring reach. Regularly updated websites and social media channels can offer engaging and up-to-date information, keeping the momentum of the campaign alive. By employing these strategies, the campaign's legacy will persist, promoting a sustained shift towards sustainable transport options.

c. Predictive Action Steps with Identified Success Indicators		
i. Phase/Stage	ii. Expected Output	iii. Timeline
Stage 1: Research and Strategy Development	SWOT Analysis Target audience profiling, key messages, current market analysis and potential barriers to electric vehicle adoption Communication strategy document Campaign goals and KPIs outline	Weeks 1-2 (2 weeks)
Stage 2: Creative Development	Develop the core message and visual identity for the campaign, ensuring it resonates with the target audience Content calendar for all platforms	Week 3 (1 week)
Stage 3: Content Production	Suite of content assets including social media posts, infographics, testimonials, and educational videos about electric vehicles	Weeks 4-6 (3 weeks)
Stage 4: Digital Presence and Campaign Execution	Campaign landing page, social media profiles, establish presence on relevant social media platforms Execution of all planned activities and real-time adjustments based on analytics and feedback List of partnerships with relevant stakeholders and setup of digital platforms for campaign dissemination	Week 7-10 (4 weeks)
Stage 5: Monitoring, Evaluation and Recommendations	Analytics report (website traffic, social media engagement) Feedback and survey summaries Campaign impact assessment report Recommendations for future campaigns	Week 11-12 (2 weeks)
d. Target Date to Start	July 1, 2024	
e. Target Date to End	September 30, 2024	
III. RESOURCES		
Social Media Campaign: Utilize free platforms like Canva for designing engaging posts and infographics about electric vehicles.		

- **Video Content:** Create short, informative videos and testimonials about EVs using a smartphone and free editing software. Allocate PHP5,000 (on personal account) for transport fares, meals and necessary props.
- **Online Contests (if applicable):** Run online contests encouraging participants to share their thoughts or creative content about EVs. Offer digital rewards (e-book on government publications, digital shoutouts that don't require a physical purchase)

Each of these components should be crafted to maximize reach and impact while staying within the modest budget. Since the fellowship program also provides opportunity for possible funding for best action plan projects, the fellow may also propose this campaign project for possible funding.

IV. COMMENT(S) AND RECOMMENDATION(S)

a. Immediate Superior (Mentor)	
b. Head of the Office/Division/Service	
c. Human Resource Development Division
